

Branding Guide: SoilProve

Brand Foundation

Mission: Turn soil data into proven savings—helping corn farmers protect margins against price volatility and yield risk, one field at a time.

Vision: A future where every farmer confidently acts on soil data, backed by peer validation and transparent outcome proof.

Core Values: - **Trustworthy:** We do what we say. Show our work. Farmers can rely on us—no shortcuts, no exaggeration. - **Direct:** Speak plainly. No jargon. Farmers get straight answers about savings, risks, methodology. - **Grounded in Evidence:** Every claim backed by data—peer results, university research, field outcomes. Proof-driven, never sales-driven. - **Collaborative:** Partner with farmers and agronomists. In the field together. Listen, learn, adapt.

Brand Promise: We prove what your soil data is worth—through peer-validated field results and transparent outcome tracking.

Brand Archetype: The Trusted Advisor. Expert, not arrogant. In the field with farmers, not selling from a booth.

Target Audience & Emotional Arc

Primary Audience: High-motivation margin protectors. 500-2,000 acres corn (Iowa/Illinois/Indiana). \$100K+ annual fertilizer spend. Data-driven, risk-averse on yield, actively concerned about 2025 fertilizer costs.

What They Care About: - Protecting margins against price volatility - Acting on soil data they already have - Understanding exactly why recommendations matter - Proof from farmers like them (peer validation)

Emotional Arc: Skeptic → Validated → Empowered - **Skeptic:** Anxious about margins, frustrated soil data sits unused, yield-risk paralyzed - **Validated:** Peer proof removes skepticism. Transparency removes risk. - **Empowered:** Clarity on methodology. Control over decisions. Support knowing someone has their back.

How They Want to Feel: - Discovering SoilProve: Validated (peer proof) + Confident (transparency removes risk) - Using SoilProve: Clarity (understand the logic) + Control (no black box) + Support (we're backing this decision)

Voice & Tone Guidelines

Voice (Consistent): - **Clear & Plain-Spoken:** No jargon. Farmers understand every sentence on first read. "Your field's nitrogen needs are different from your neighbor's." - **Evidence-Based:** Back every claim with data, peer results, methodology. "Mark saved \$24/acre. Here's how we got there." - **Humble & Collaborative:** Alongside farmers, not above them. "We work with your agronomist to make sure this fits your operation." - **Action-Oriented:** Focus on what happens next. "Test this on your lowest-risk field first."

Tone (Context-Dependent): - **Marketing:** Confident, outcome-focused, peer-validating. Example: "Farmers protecting margins. One field at a time." - **Support:** Supportive, reassuring, clear. Example: "Your first field matters most. We'll walk you through it step by step." - **Technical:** Educational, transparent, precise. Example: "Here's exactly how we calculated your nitrogen prescription." - **Error/Risk:** Honest, solution-focused, reassuring. Example: "We're missing yield data. Here's what we can show + how to fix it."

Vocabulary: - **Use:** Field, soil test, yield, margins, acres, prescription, agronomist, prove, validate, transparent, track, optimize, protect, peer-validated, field-tested, data shows, we work with - **Avoid:** Algorithm, AI-driven, machine learning, platform, SaaS, leverage, synergize, revolutionary, game-changing, disruptive, maximize, potentially, might

Cornerstone Word: "Prove/Proven" threads through mission, promise, name, every touchpoint. Use constantly.

Visual Direction

Color Palette: - **Primary: Slate Blue (#4A5568)** - Trust, precision, science. Headers, buttons, primary UI, brand mark. - **Secondary: Warm Terracotta (#A0522D)** - Field/soil context, warmth. Accents, highlights, CTAs, field callouts. - **Supporting: Clean White (#FFFFFF)** - Clarity, transparency. Backgrounds, negative space. - **Supporting: Light Gray (#F7FAFC)** - Subtle contrast, readability. Secondary backgrounds. - **Text: Dark Charcoal (#2D3748)** - Legibility, professionalism. Body copy, primary text.

Typography: - **Headlines (H1-H3):** Inter or Montserrat (sans-serif, bold/semibold). Clean, modern, precise. Page titles, case study headlines, dashboard headers. - **Body Copy:** Inter or Montserrat (regular, 16px min). Easy to scan, mobile-readable. Descriptions, explanations, guidance. - **Technical:** Monospace (Monaco, Courier) for code, MRTN formulas, API docs. Signals precision.

Imagery Style: - **Field Photography:** Authentic, unfiltered. Real farmers, real soil, real fields. No stock photos. Case studies, testimonials, farmer spotlights. - **Data Visualization:** Clean, Slate Blue + Terracotta. Field maps with prescription overlays, outcome dashboards, cost/savings charts, yield

comparisons. Emphasize transparency. - **No Illustration:** Skip custom illustrations. Dilutes credibility focus.

Visual Guidelines: Generous white space. High-res, mobile-optimized photography. Consistent color palette across all touchpoints. Primary (Slate Blue) dominant, Terracotta for emphasis.

Messaging Framework

Tagline: "Prove Your Soil Data" Action-oriented, mission-aligned, farmer-forward.

Value Proposition: For corn farmers managing fertilizer costs and yield risk, SoilProve is a field-optimization service that turns soil data into transparent, peer-validated savings. Unlike equipment-locked platforms or black-box algorithms, we prove every recommendation with documented field results and clear methodology.

Elevator Pitch (30 seconds): We help corn farmers in Iowa, Illinois, and Indiana turn their existing soil data into proven savings—without risking yields. Our agronomist-backed approach shows field-specific fertilizer recommendations, documents outcomes, and validates every prescription through peer farmer results. One field at a time, farmers are protecting margins against 2025 price volatility.

Key Messages by Channel: - **Website Homepage:** Headline: "Prove What Your Soil Data Is Worth." Subheadline: "Field-tested prescriptions, peer-validated results, transparent savings." CTA: "See How Farmers Are Saving." - **Social Media:** Bio: "We prove soil data pays. Field-specific fertilizer optimization, peer-validated, grounded in science." Posts: Peer farmer stories (\$X/acre saved), methodology explainers, outcome updates. Lead with numbers. - **Email:** Subject lines data-driven ("Your Field 3 Results Are In"). Greeting: Direct, personal. Sign-off: "In partnership, [Name], SoilProve Team." - **Case Studies:** Format: Meet [Farmer], [Acres], [Location]. Problem. Solution. Proof (verified savings + yield protected + methodology transparent). Lead with numbers first.

Brand Do's and Don'ts

DO: - Lead with proof. Every claim starts with a number or peer validation. "\$24/acre savings." "80% retention." "Peer-validated results." - Show your work. Explain methodology transparently. Why this nitrogen rate? Soil test + MRTN model + peer results = proof. - Use specific numbers. \$15-25/acre savings, not "significant." 500-2,000 acres, not "large." Precision builds credibility. - Feature real farmers. Authentic photography, real names, real locations, real results. No stock photos. - Acknowledge constraints. "Yield risk is real." "Flat-rate recommendations feel safer." "This works best on fields you're comfortable testing." - Use partner language. "We work with your agronomist." "Farmers like you validated this." Collaborative, not top-down. - Emphasize "proven." Use constantly. Peer-proven, field-proven, outcome-proven. - Keep it simple. Plain English, short sentences, mobile-readable. Farmers check dashboards in fields. - Be transparent about pricing. No hidden tiers. \$300-350/month clearly stated, justified by outcome value + support + agronomist partnership.

DON'T: - Make promises without proof. Never "maximize savings" or "optimize yields" without documented field results. - Hide methodology. Don't say "advanced algorithm." Explain MRTN, soil science, transparent logic. - Use tech jargon. No AI-driven, machine learning, platform, SaaS. Farmers don't trust black boxes. - Use corporate speak. Leverage, synergize, innovative solutions, paradigm shift. Speak like a neighbor. - Oversell or hype. Revolutionary, game-changing, disruptive, cutting-edge—only with proof. SoilProve is grounded. - Make vague claims. Enhanced, improved, best-in-class without numbers. Be specific. - Use stock photography. Generic corn fields, generic farmers. Authenticity matters. - Position yourself as expert farmer. You're not. Agronomists and farmers are experts. You're the trusted tool. - Ignore yield risk. Don't downplay farmer conservatism. Acknowledge it, address it, prove safety.

When in Doubt: Would a trusted agronomist say this? Would a skeptical farmer believe it? Does it sound like proof or a sales pitch? If it sounds like a sales pitch, rewrite it.

Proof-First Communication Standard

Every touchpoint (website, email, social, case studies) leads with a number or proof point.

Not: "We help farmers optimize fertilizer use." Yes: "Farmers are proving \$24/acre savings with field-specific prescriptions."

Not: "Our platform tracks outcomes." Yes: "80% of farmers renewed because they saw documented savings on every field."

Not: "Peer farmers validate our approach." Yes: "Mark in Story County saved \$24/acre. Caspian in Boone County saved \$19/acre. Here's exactly how."

Proof Hierarchy (Lead With This Order): 1. Specific dollar/acre savings (\$15-25/acre) 2. Peer farmer

name, location, outcome 3. Yield protection proof ("Yields protected, margin improved") 4. Methodology transparency ("Here's how we calculated it") 5. Call to action ("See the full case study" or "Get started")

This hierarchy applies to homepage headlines, email subject lines, social posts, case study openings, and sales conversations.

Brand Consistency Checklist

Before publishing anything—website, email, case study, social post—ask:

✓ Does it lead with a number or proof point? ✓ Would a skeptical farmer find this credible or sales-y? ✓ Is the methodology explained (not hidden)? ✓ Are real farmers featured (not stock photos)? ✓ Does it use plain language (no jargon)? ✓ Does it acknowledge farmer constraints/risks? ✓ Is "prove/proven" language used? ✓ Is pricing transparent (if mentioned)? ✓ Does it sound collaborative ("we work with") not top-down? ✓ Does it answer: What's the proof? What's in it for me? What do I do next?

If any answer is "no," revise before launch. SoilProve's credibility depends on consistency across every touchpoint.
